PROFESSIONAL PROFILE

Production Manager and mechanical engineer with more than five years of experience across additive-manufacturing applications, field service, production operations and digital workflow development. Leads a multi-technology additive operation producing more than 50,000 parts in a typical year under his control. Combines floor-level operating judgment with practical software, automation and bounded AI-assisted systems, including deterministic document automation, local language-model inference, retrieval and human-reviewed workflows.

Manufacturing leadership	Additive manufacturing	Digital operations
Production planning, capacity and WIP control, staffing, maintenance readiness, quality, inventory and delivery recovery	Application discovery, DFAM, material and process selection, build strategy, post-processing and field service	Workflow mapping, Odoo deployment, SharePoint systems, automation, retrieval, deterministic validation and human review

PROFESSIONAL EXPERIENCE

Production Manager

July 2026 - Present | Designfusion Inc. | Toronto, ON

- Direct production priorities and master scheduling across a multi-technology additive-manufacturing operation from build preparation through finishing, inspection and shipment.
- Control staffing and shift planning, training, capacity, WIP, materials, maintenance windows, quality acceptance, inventory, delivery recovery and customer commitments.
- Manage an operation producing more than 50,000 parts in a typical year, adjusting plans as demand, equipment availability and quality risks change.
- Evaluate production-management platforms against mapped operating requirements and lead Odoo configuration, rollout, training and workflow standardization.
- Lead structured problem solving across equipment, process and delivery disruptions, converting recurring issues into maintenance actions, procedures and operating-system improvements.

Applications Specialist

January 2021 - June 2026 | Designfusion Inc. | Toronto, ON

- Translated customer requirements into viable additive applications through discovery, feasibility review, DFAM, material and process selection, build strategy, sample development and implementation support.
- Guided engineering and design teams on manufacturability, part consolidation, assembly simplification and practical additive adoption.
- Supported applications across HP MJF, Formlabs resin and SLS, Markforged CFR and Metal X, and FDM technologies.
- Performed Markforged Metal X application evaluation, DFAM, slicing, printing, washing, sintering, troubleshooting, installation and customer training.
- Performed certified HP MJF field service, equipment troubleshooting, installation and recovery planning.
- Assumed increasing responsibility for production planning, equipment readiness, materials, post-processing, quality, maintenance and delivery recovery as production grew.

SELECTED SYSTEMS WORK

Slip Maker WORKING INTERNAL TOOL	Built a controlled workflow using local Llama 3.2 inference through Ollama to extract purchase-order information, generate part imagery and produce a reviewed Excel document. Reduced normal preparation from approximately 20 minutes to approximately 2 minutes per document, including review.
Production Workflow Control DEPLOYED WORKFLOW	Mapped production requirements, built and used a SharePoint benchmark, explored relationships through an AI-assisted web prototype, then led Odoo selection, configuration, migration, training and rollout.
Maintenance and Error Traceability OPERATIONAL FRAMEWORK	Designed a connected SharePoint framework covering machine use, print history, error events, maintenance records and technician actions, enabling defects to be traced before additional production was affected.
UtilityOps Readiness PUBLIC LEARNING BUILD	Defined the problem, data flow, synthetic examples and test cases for a source-grounded readiness assistant combining deterministic checks, retrieval, citations and controlled language-model interpretation.

TECHNICAL DEPTH

Production operations Master scheduling, capacity and WIP control, staffing and shift planning, quality acceptance, maintenance readiness, materials, inventory and delivery recovery.	Additive manufacturing HP MJF, Formlabs SLS and resin, Markforged CFR and Metal X, FDM, application discovery, DFAM, build strategy, field service, post-processing and inspection.
Software and systems Odoo, SharePoint, Power Automate, Office 365, Python, Next.js, Supabase, workflow mapping, data-model design, local LLM inference, retrieval and deterministic validation.	Engineering SolidWorks, Solid Edge, Altair Inspire, FEA, topology optimization, fixture design, technical documentation and manufacturability review.

EDUCATION

Mechanical Engineering Technology: Design	2018 - 2020 Centennial College High Honours
Bachelor of Engineering - Mechanical Engineering	2013 - 2017 MG University WES Canadian equivalency

CERTIFICATIONS AND PROFESSIONAL DEVELOPMENT

HP Multi Jet Fusion - Field Service Engineer	Certified SolidWorks Associate (CSWA)
Data Science Foundations - DSI, University of Toronto	AI Agents Fundamentals - Hugging Face
Introduction to Artificial Intelligence - IBM / Coursera	Generative AI: Introduction and Applications - IBM / Coursera
